

# Agency Licence

## Product Sheet

### Unlock valuable insights for your agency

CameraForensics helps law enforcement agencies identify CSAM perpetrators and victims by simplifying complex image forensics and adding valuable digital intelligence.

Offering tailored integrations, our Agency Licence is designed to fully support entire law enforcement agencies to access critical intelligence.

With 4.1 billion images indexed, many users within the same agency can simultaneously take advantage of the powerful tools needed to search our expansive image database to source valuable case-specific information, and efficiently drive change.

## A range of advanced features

With our Agency Licence, we can enable large agencies to access vital insights and provide a range of additional features. Throughout our involvement, we'll work alongside you to securely integrate every service. This ensures that all tools complement your existing architecture, helping your teams to access critical intelligence in confidence. These additional features include:

### Camera ID

Camera ID is the latest tool enabling users to detect other images taken with the same camera or smartphone, even if there's no metadata present.

With Camera ID, users can strengthen cases by asserting that images are captured with the same camera, as well as find new information that can accelerate investigative progress – such as location data, Camera Serial Number, or possible online profiles.

### HighSide

For more secure users that want to access CameraForensics without a traditional internet connection, we can provide a specialist integration for air-gapped networks.

As a result, agency users can continue to gain valuable data without introducing a risk of exfiltration or potential unauthorised access via network breaches.

### Uniform Intelligence Hub

The first of its kind, Uniform Intelligence Hub provides an extensive database of school uniform identifiers. Armed with this database, investigators can search and identify the school from any visual clues detected in an image, such as ties or badges. This is a vital tool, as the trend for coerced images after school continues to grow.

## Get started

We're committed to supporting digital intelligence investigators in any way we can. To learn more about the CameraForensics platform and how we're supporting investigative efforts, contact us today.
